

# Lung Diseases List

**T**he **lungs** are one of the most important organs of our body. It helps in the process of respiration and as well as heart it works the purification of blood via supply of oxygen. Any problem with the lungs may result in life-threatening consequences. Air is actually taken in inside the body through the nostrils which is directly obtained by the lungs. This method unearths the lungs to many bacterial infections and conditions that if not taken attention with time may even lead to death. So, keep a note of the list of lung illnesses and try to protect yourself from obtaining them.

- Bronchitis: In case of bronchitis, midair passage from the windpipe to the lungs gets annoyed.
- Smokers are more likely to suffer from this condition.
- Chronic **bronchitis** can lead to chronic obstructive pulmonary disease (COPD).
- Patients of chronic bronchitis possess **cough** for decades.
- Inflammation of the wind pipe to the lungs contributes to severe soreness.
- The actual mucus is heavy, yellow, and greenish.

Congested nasal and also torso with slight mucus along with a runny nose may not be dangerous. Nonetheless, symptoms such as sore throat, fever, discomfort, yellow or green mucus, diarrhea, nausea, and so forth., could signal an actual issue like flu.

## Major DiseasesOther DiseaseLung Disease Symptoms as Well as Treatments

The symptoms of the lung diseases totally depends upon its sort. The signs and symptoms may also vary from person to person as the opposition power of the body also matters. Cough, shortness of breath, wheezing, fatigue, chills, shaking, accelerated heart beat, and so forth., are some of the most common symptoms. Chronic lung disease may bring about blood throughout coughing, failure to breathe, chest pain, etc. These types of signs can be treated as soon as possible to avoid issues. Treatment will also rely upon the type of condition. Antibiotics, supplemental vitamins, anesthetics, inhalers, etc., are some of the common treatments. In case of severe situation non-invasive positive pressure ventilation (NIV), chest physiotherapy, supplemental oxygen therapy, and so on., may be given. Lung diseases caused by smoking like emphysema and asthma, can be treated only when the person stops smoking.

- At times, pressure might increase to such an extent that it might lead to cardiovascular dysfunction.
- That is medically referred to as tension pneumothorax.
- In the event that left untreated, it may even lead to death.
