## What are the Signs and Symptoms of Bronchitis?

Acute bronchitis caused by an infection generally develops after you have a cold or the flu. The main symptom of acute bronchitis is a constant cough, which may last 10 to 20 days. Other symptoms of acute bronchitis include wheezing (a whistling or squeaky sound when you breathe), low fever, and chest tightness or pain. You also may have shortness of breath, especially with physical action, if your acute bronchitis is intense. The signs and symptoms of chronic bronchitis include coughing, wheezing, and chest discomfort.

## Acute Bronchitis

Both adults and children can get acute bronchitis. Most healthy individuals who get acute bronchitis get better without any problems. Often someone gets acute bronchitis a day or two after having an upper respiratory tract disease such as the flu or a cold. Breathing in things that irritate the bronchial tubes, like smoke can also causes acute bronchitis. The most common symptom of acute bronchitis is a cough that usually is not wet and hacking initially.

“

**Coughing Up Phlegm** Coughing is a reflex response occurring due to stimulation of the sensory nerves in the inner lining of the respiratory passages. It usually occurs due to blockage in the respiratory passages by inhaling dust particles in the air, or when a morsel...
